

Collin Hough
2023 Baseball Analytics Trainee Take Home
Part 3

I would build my future rotation around Pitcher B. Overall, both pitchers have similar swing and miss rates, but I found Pitcher B had a lower hit rate. Because of this and their deeper arsenal, they are the better pitcher to build around. Player A throws fastballs, sliders, and curveballs most of the time. In comparison, Player B throws fastballs, curveballs, changeups, and sliders. Player B has a higher swing and miss rate on all of these pitches with the exception of the fastball, but I believe their deeper arsenal could project into them becoming the clear-cut better player in the future.
